

01.A. Introduction to eDoctrina

eDoctrina is a web-based program full of user-friendly tools that make educator's jobs easier!

This comprehensive system can be used for planning, curriculum mapping, student assessments, RTI tracking, data reporting, student learning objectives and teacher observations. Below is an image of the eDoctrina homepage, the very first place you will be taken after logging in:

What is eDoctrina?

eDoctrina is a web-based education software that helps educators: (1) prioritize state standards, (2) create curriculum maps and standards-based lesson/unit plans, (3) build standards-based paper and online assessments, (4) print answer sheets, (5) scan assessment results (no more hand-correcting!), (6) quickly pin-point students who are falling behind and what standards/skills they are having trouble with, (7) manage school/district SMART goals, (8) track student-centered goals (RTI and IEP) and (9) manage teacher observations.

Its use and development is based on several of education's most impactful best practices, including data-driven decision making, common formative assessments, Assessment for Learning, and Response to Intervention.

How can it help?

eDoctrina saves teachers time by eliminating hand correcting and allows them to teach smarter — to have data readily available to guide instruction. Administrators benefit from reporting that highlights progress at the district, building, grade, class and even individual student level. All students (K-12) will benefit from targeted instruction. Also, eDoctrina includes functionality based on Assessment for Learning (AFL) principles, allowing youths to become more engaged in the learning process.
